MicroArmor was established in 2007. MicoArmor’s mission statement cites as its primary goal: *to provide a high quality sanitizer/disinfectant products that eliminate dangerous micro-organisms safely, and without posing a threat to our environment.*

Our surface disinfectants meet all of the US EPA’s standards for disinfectants (pesticides), and are registered with each state where the products are sold.

In 2005 MicroArmor produced a new generation disinfectant that is not only a hospital grade disinfectant but is also a cleaner that removes dirt, grime and light grease while leaving no residue when dry. This product is a value since you are replacing one of the products (cleaner/disinfectant).

In 2008, MicroArmor started to produce a “leave on” hand sanitizer that is a non-alcohol product that effectively eliminates harmful bacteria and fungus.

After many months of testing, MicroArmor found a high quality formulation that is effective, safe and is 75% bio-renewable. Additionally, This product helps to condition your skin with repeated use.

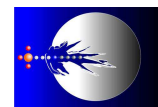

Throughout the development process MicroArmor has kept a mindful eye on the containers that we put our products in. All of the containers are re-cyclable, and we are researching the possibility of using non-petroleum based plastics.

In 2010, MicorArmor developed one of the most effective all natural bed bug eliminators in the United States. Our all natural spray not only eliminates them within one minute, it also prevents the re-infestation of them for up to one month. Our product has a pleasant cinnamon odor that is totally safe for use on beds, floors, and clothing.

This year we have released two new products that utilizes a bio-static technology that eliminates microbials through positive electrostatic charges. This protective coating offers 24 hour a day, seven day a week protection against the bacteria and fungal spores.

MicroArmor is pleased to introduce their latest product offering of “**IceRok**” **Artesian Glacier Water**. 100% created by nature over time; nothing added! No toxins, Pharmaceuticals, Chemicals, Hormones, or industrial Pollutants. Natural Antioxidant, rich in electrolytes. Natural 7.9 ph and has Zero BPA or DEHA! Freezable GlacierPak is not sensitive to cold or heat; No toxic leaching which gives it a safe extended shelf life. Environmentally friendly-collapsible package which reduces landfill space. The recyclable package has 50% less material than conventional bottles.

MicroArmor Introduces New Anti-Bacterial Hand Cream

Hand Cream...

This year MicroArmor has created and produced a new anti-bacterial hand cream that moisturizes your hands/skin, and kills bacteria within 15 seconds of applying. This formulation is non-alcohol, FDA TFM compliant and also provides residual protection for hours after use (4 Hour Protection) . Our natural yet effective formulation will leave your hands feeling comfortable and soft without an oily residue while assisting in the elimination of germs. Our convenient two ounce tube is perfect for travel and will provide many applications of moisturizing comfort and microbial protection while you are away from home!

Our creams and lotions have a very pleasant mild clean scent that will not offend your neighbors and are found to be safe around fragrance sensitive individuals.

Hand Lotion with Anti-bacterial Protection...

MicroArmor also has developed a hand lotion that will dispense freely from an institutional wall mount dispenser. This formulation, like our 2 ounce tube, offers the same great skin moisturizing as well as residual microbial protection from a wide spectrum of bacteria and fungal exposures for hours. This easy to install durable manual dispenser will assist in providing many years of skin hygiene. Each dispenser comes with two sided tape and wall screws for quick

Our refill cartridges are very easy to install and are extremely cost effective to use in hospital, and institutional facilities. Each refill cartridge comes in a 1000 ml bag that is durable and safe to store for up to two years. Just open the easy open top remove the spent cartridge and install the new one. No leaking or clean up! Each cartridge has a self contained pump that is replaced each time with the cartridge. This eliminates spills and breakage.

For additional information on these products refer to the pages that follow.

All of our Product Formulations are made in the United States of America!
